PREPARING THE WATER FILTER CARTRIDGE

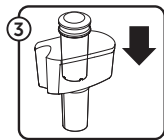

Remove the filter cartridge from its bag and handling it by the top only, peel off the sticker. There may be a small residue of black carbon particles in the bag or adhering to the cartridge body; this is normal. These particles are harmless and are washed off during the preparation process.

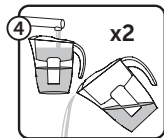

1 Handling the filter cartridge by the top only, peel off the sticker.

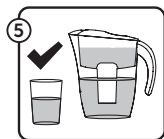

2 Soak the filter cartridge in a bowl of water for 5 minutes to remove all air bubbles. The filter cartridge is now ready for use.

3 Place the filter cartridge in the inner vessel and press firmly down; the cartridge should stay in place if the inner vessel is turned upside down.

4 Fill the inner vessel with cool water and let it pass through the filter. Once it has been filtered, discard the water. Repeat the procedure once more.

5 Fill the inner vessel for a third time, your water filter jug is now ready for use.
